Task 1:

Goal: Decompose an app into design patterns/components

1. Gmail Web Application

<https://mail.google.com/mail/>

3. Component list:

- ① Menu (Top left Corner)
- ② Compose (Button)
- ③ Search (Search mail)
- ④ Icon buttons (Support, Settings, Google Apps)
- ⑤ Navigation drawer (Inbox, Sent, Drafts etc)
- ⑥ Navigation rail (Labels)
- ⑦ Right-side Apps (Calendar, Tasks etc)
- ⑧ Conversational view (Cards)
- ⑨ Tooltips (Refresh, Select etc)
- ⑩ Snackbar (End of the page)
- ⑪ Checkbox

4. Critique:

Strengths:

- ① Compose button is easily discoverable and clear main action.
- ② Navigation drawer / tabs help organize inbox.

③ Right-side Apps panel integrates Calendar Tasks etc without leaving Gmail.

Weakness:

- ① Inbox density makes scanning harder for casual users.
- ② Label chips sometimes overpower subject text visually.

Suggestions:

- ① Standardize compose window tool visibility.
- ② Reduce visual weight of label chips.
- ③ Enhance keyboard navigation discoverability & accessibility.
