

Part I

Lab-Based Usability Test Plan.

1. Website

Booking.com — a travel site for searching and booking hotels, flights and stays.

2. Purpose

To evaluate how easily users can find and book a hotel on Booking.com & identify usability issues in the booking process.

3. Tasks

- 1) Search for a hotel in Paris for 3 nights for 2 adults under \$150/night.
- 2) Apply filters: Free Wi-Fi, Breakfast included and Rating above 8.
- 3) Choose a hotel and go to the payment page (don't pay).
- 4) Check the cancellation policy and reviews.

4. Scenario

"You and a friend are planning a 3-night trip to Paris. Find a hotel under \$150/night with free Wi-Fi and breakfast included. Check reviews and cancellation policy before booking."

5. Expected Actions

Use the search bar, apply filters, compare options, view details, and proceed to the booking page.

6. Success Metrics

<u>Metric</u>	<u>Goal</u>
Task Completion	$\geq 90\%$
Time per task	As short as possible
Errors	< 2 per task
Satisfaction	$\geq 4/5$
SUS score	≥ 80

7. Data to Collect

Quantitative: Completion rate, time, clicks, errors, SUS score.

Qualitative: Think-aloud feedback, observer notes, post-test comments.

8. Data Analysis

- Compute averages for time & errors.
- Analyze comments for common issues.
- Combine results to identify key usability problems & suggest improvements.

9. Expected Outcomes

Find how intuitive the site is, where users struggle, and recommend UI improvements for smoother booking.
